

How do I turn on Face Matching?

This video step-by-step details how you can choose to activate Face Matching for your book during the Portrait Import process. If you change your mind about Face Matching after Portrait Import, ask your Yearbook Representative and they can enable or disable for you.

1

After completing the last step of importing the portraits, a dialog window will open, giving you the option to activate Face Matching. Click on **Use Face Matching** button to activate the feature. If you DO NOT want to use Face Matching click on the **Don't Use Face Matching** button.

NOTE: If you opt out of Face Matching but later change your mind, contact your Yearbook Provider to enable Face Matching for you.

2

If you click the Use Face Matching button, a new message will appear stating that **Face Matching is running**. Face Matching has been enabled. Face Matching will tag your candid photos within 48 hours and periodically thereafter. Check the status in the Caption and Tag dialog in Manage Photos. Click on the **X** to **Close** the dialog.
